(160 hours)

Pre-requisite: Telecom OSP & Subscriber Line Installation – Copper Cable/Pots and DSL NC II

Course Description:

This is a specialization course that leads to a Telecom OSP Installation (Fiber Optic Cable) National Certificate Level II (NC II). Two (2) core competencies that a student ought to possess are identified, namely: 1) installing and splicing/joining aerial/underground fiber optic cables, and 2) performing optical testing and repair. The preliminaries of this specialization course include the following: 1) discussion of the relevance of the course, 2) explanation of key concepts of common competencies, 3) explanation of core competencies relative to the course, and 4) exploration of career opportunities.

CONTENT	CONTENT STANDARD	PERFORMANCE STANDARD	LEARNING COMPETENCIES	CODE
<p>Introduction</p> <ol style="list-style-type: none"> 1. Relevance of the course 2. Concepts and core competencies in Telecom OSP Installation (Fiber Optic Cable) 3. Career opportunities 	<p>The learner demonstrates an understanding of key concepts, underlying principles and core competencies in Telecom OSP Installation (Fiber Optic Cable).</p>	<p>The learner independently creates/provides quality and marketable product and/or service in Telecom OSP Installation (Fiber Optic Cable), as prescribed by TESDA Training Regulations.</p>	<ol style="list-style-type: none"> 1. Discuss the relevance of the course. 2. Explain key concepts of common competencies. 3. Explain core competencies of Telecom OSP Installation (Fiber Optic Cable). 4. GLOSSARY

- | | |
|----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Buffer tube cutter | - used to cut and separate buffer from fiber optic strands |
| 2. Cable | - used for distribution to provide communication |
| 3. Cable Slitter | - tool used to slit or open FO cable |
| 4. Cleaver | - used to cut fiber strands |
| 5. Crimping | - proper preparation of cable, appropriate type of connectors |
| 6. Drop cable | - a small-diameter cable leading from the tap-off in the cable plant to the subscribers' TV receivers. A drop cable used by the CATV system should be either RG-59 or RG-6, 75-ohms coaxial cable (foam). |
| 7. Environment | - area surrounding the work site which can be directly or indirectly affected by occurrences at the work site. It includes the atmosphere, soils, drains, underground water tables, and the ecosystem. Protection of the environment would require the proper disposal of waste materials, restriction of burning, correct handling of toxic substances, containment of CFCs and the like. |
| 8. Established procedures | - formal arrangements of an organization, enterprise or statutory authority of how work is to be done. |
| 9. Fiber optics | - a technology that transmits light rather than electricity through a fiber made of thin, flexible glass or plastic. Fiber optic cables are replacing older copper cables for most telecommunications applications. |
| 10. Fiber optic cable | - set of individual optical fibers bundled together. Fiber optic cables have higher bandwidth than standard copper cable. |
| 11. Fiber optic stripper | - used to strip fiber coating |
| 12. Hazardous materials | - flammable gases and vapors and combustible dusts |
| 13. Headend | - the main site at which all the signals from the various program sources are received, assembled, processed and combined for transmission through the distribution network. It is the originating point for all services carried on a cable television system. |
| 14. Mechanical connector | - connectors used to join fiber through mechanical crimping method. |
| 15. Modifications | - make changes on the physical parameters or operational function of a device, component or piece of equipment or apparatus. |
| 16. Notification (notified) | - includes verbal, written, electronic or recorded information at completion of work which may be required to be completed in accordance with established procedures. |
| 17. OH&S policies and procedures | - Arrangements of an organization or enterprise to meet their legal and ethical obligations of ensuring the work place is safe and without risk to health. |
| 18. Outside plant (OSP) | - a part of telephone network system that provides for the distribution of voice and data channels to the paying subscribers |
| 19. OTDR | - Optical Time Domain Reflectometer used to test or locate fiber optic faults. |
| 20. Requirements | - that to which equipment and procedures and their outcomes must conform and includes statutory obligations and regulations and standards called up by legislation or regulations. |
| 21. Servicing | - undertaking routine inspection, repair and maintenance of circuits, systems or apparatus, maintaining, fault-finding and repair of equipment, plant and machinery |
| 22. Splicing | - the act or process of creating a physical connection between two separate pieces of optical fiber. Optical fibers should only be spliced by a technician who possesses the required skills and interconnection technology. |
| 23. Standards | - technical documents, which set out specifications and other criteria forequipment, materials, and methods to ensure they consistently perform as intended. |
| 24. Subscriber | - a person who pays a fee for voice and data services. |
| 25. Subscriber terminal | - the telephone network system terminal to which a subscriber's equipment is connected. |
| 26. Supervised industry training (SIT) | - similar to on-the-job training– an approach in training designed to enhance the knowledge and skills of the trainee through actual experience in the workplace to acquire specific competencies prescribed in the training regulations. |

INFORMATION AND COMMUNICATIONS TECHNOLOGY – TELECOM OSP INSTALLATION (FIBER OPTIC CABLE) NC II
(160 hours)

- 27. System
 - a group or combination of inter-related, inter-dependent or interlocking elements forming a collective entity. It includes circuits, apparatus, equipment and the like.
- 28. Telecom
 - refers to telecommunication. It is the process of transmitting information to a receiver by means of electric current or pulses of light.
- 29. Termination
 - the act by means of which an electrical connection to an apparatus is established; specifically a prepared joint or connection between a cable, cord or conductor and a point in an electrical circuit such as a terminal or connection point. Such terminations include soldering, crimping, clamping, wire wrapping, insulation piercing/compression.
- 30. Testing devices
 - devices and instruments used to ensure safety requirements and operational functions are met, and to diagnose faults in apparatus, circuits or systems.
- 31. Visual fault locator
 - used to locate/trace fibers fault (open fault)

Sample: **TLE_ICTFOC9-12ISF-Ia-e-1**

LEGEND		SAMPLE	
First Entry	Learning Area and Strand/ Subject or Specialization	Technology and Livelihood Education_ Information and Communications Technology Telecom OSP Installation (Fiber Optic Cable) NC II	TLE_ICT FOC 9-12
	Grade Level	9 to 12	
Uppercase Letter/s	Domain/ Content/ Component/ Topic	Installing and Splicing/Joining Aerial/ Underground Fiber Optic Cable	ISF
			-
Roman Numeral <i>*Zero if no specific Quarter</i>	Quarter	Quarter One	I
Lower case letter/s <i>*Put an en-dash (-) in between letters to indicate more than a specific week</i>	Week	Week one to five	a-e
			-
Arabic Number	Competency	Prepare for fiber optic cable layout and installation.	1

DOMAIN / COMPONENT	CODE
Installing And Splicing/Joining Aerial/Underground Fiber Optic Cables	ISF
Performing Optical Testing And Repair	POT

Technology-Livelihood Education and Technical-Vocational Track specializations may be taken between Grades 9 to 12.

Schools may offer specializations from the four strands as long as the minimum number of hours for each specialization is met.

Please refer to the sample Curriculum Map on the next page for the number of semesters per ICT specialization and those that have pre-requisites. Curriculum Maps may be modified according to specializations offered by a school.

**K TO 12 BASIC EDUCATION CURRICULUM
 JUNIOR HIGH SCHOOL TECHNOLOGY AND LIVELIHOOD TRACK AND SENIOR HIGH SCHOOL – TECHNICAL-VOCATIONAL LIVELIHOOD TRACK
 INFORMATION AND COMMUNICATIONS TECHNOLOGY – TELECOM OSP INSTALLATION (FIBER OPTIC CABLE) NC II**
 (160 hours)

SAMPLE ICT CURRICULUM MAP (as of November 2015)**

Grade 7/8 (EXPLORATORY)	GRADES 9-12			
EXPLORATORY	Computer System Servicing (NC II)++ 4 sems			
	Computer Hardware Servicing (NC II)+ 4 sems		*Telecom OSP and Subscriber Line Installation (Copper Cable/POTS and DSL) (NC II) 4 sems	
			*Telecom OSP Installation (Fiber Optic Cable) (NC II) 2 sems	***Broadband Installation (Fixed Wireless Systems) (NC II) 2 sems
	Illustration (NC II) 4 sems		Medical Transcription (NC II) 4 sems	
	Technical Drafting (NC II) 4 sems		Contact Center Services (NC II) 4 sems	
	Computer Programming (NC IV)+ When updated, this CG will become the following: 1. Programming (.net Technology) (NC II) 2. Programming (Java) (NC II) 3. Programina (Oracle Database) (NC II) 4 sems		Animation (NC II) 4 sems	

* Please note that these subjects have pre-requisites mentioned in the CG.

+ CG to be updated by December 2015

++ CG to be uploaded by December 2015

*** Subject has two pre-requisites

 Other specializations with no pre-requisites may be taken up during these semesters.

 Pre-requisites of the subjects to the right should be taken up during these semesters.

****This is just a sample. Schools make their own curriculum maps considering the specializations to be offered. Subjects may be taken up at any point during Grades 9-12.**
